

Ethnomycological research: A status report in West Africa in general and Benin in particular

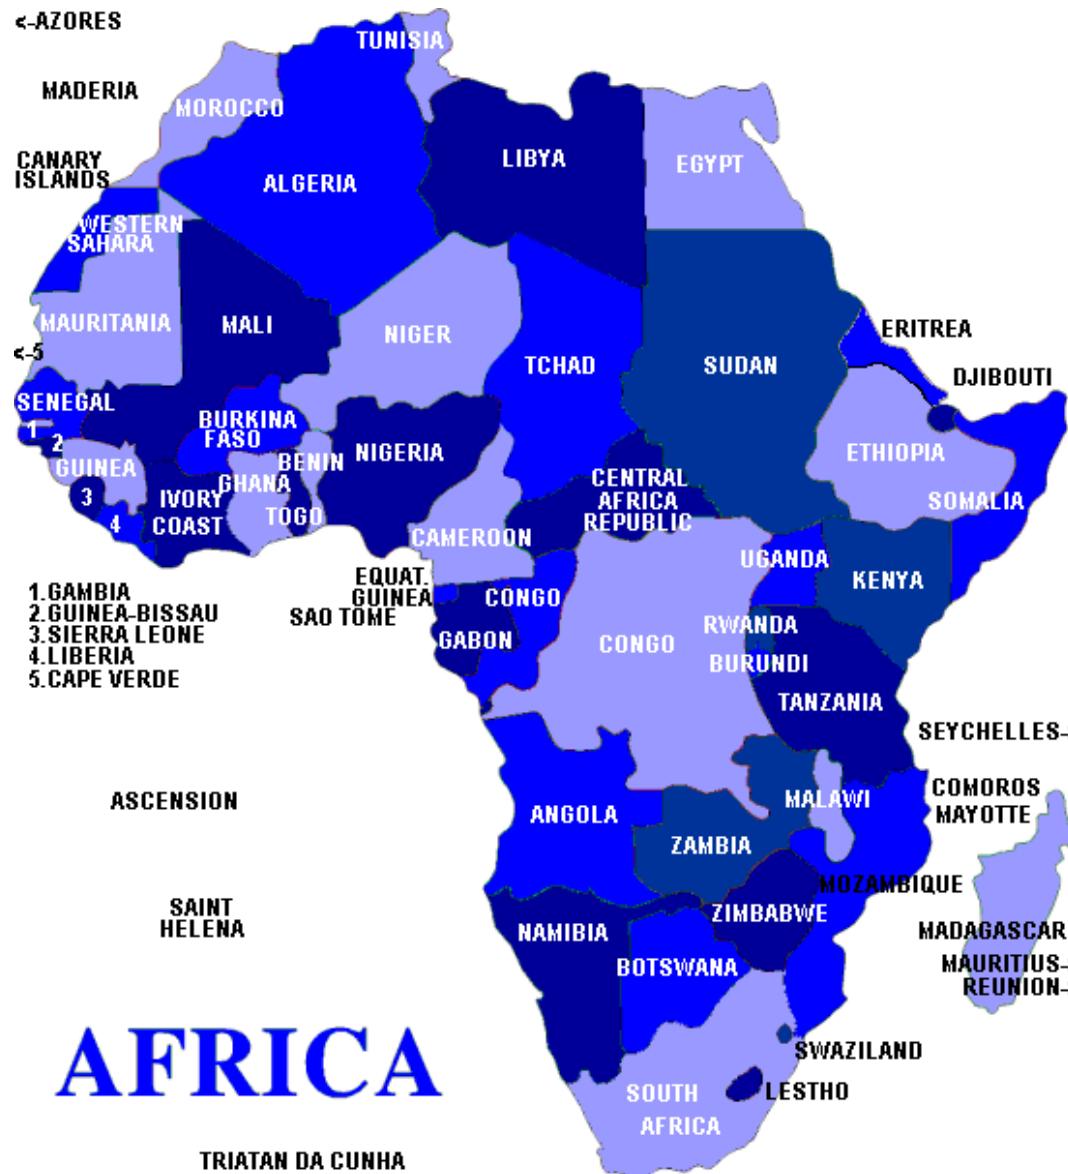

.....

Olyvia Gwladys Fadeyi / 09.12.2023/ Ethnobiology workshop in Kenya

Content (1/1)

- General info
- Diversity of wild edible mushrooms in the African continent
- Traditional and medicinal uses of mushrooms in Western Africa
edible mushrooms
- Identification of edible and inedible wild mushrooms and
toxicology problems
- Specific case from Benin
- Conclusion

General info (1/3)

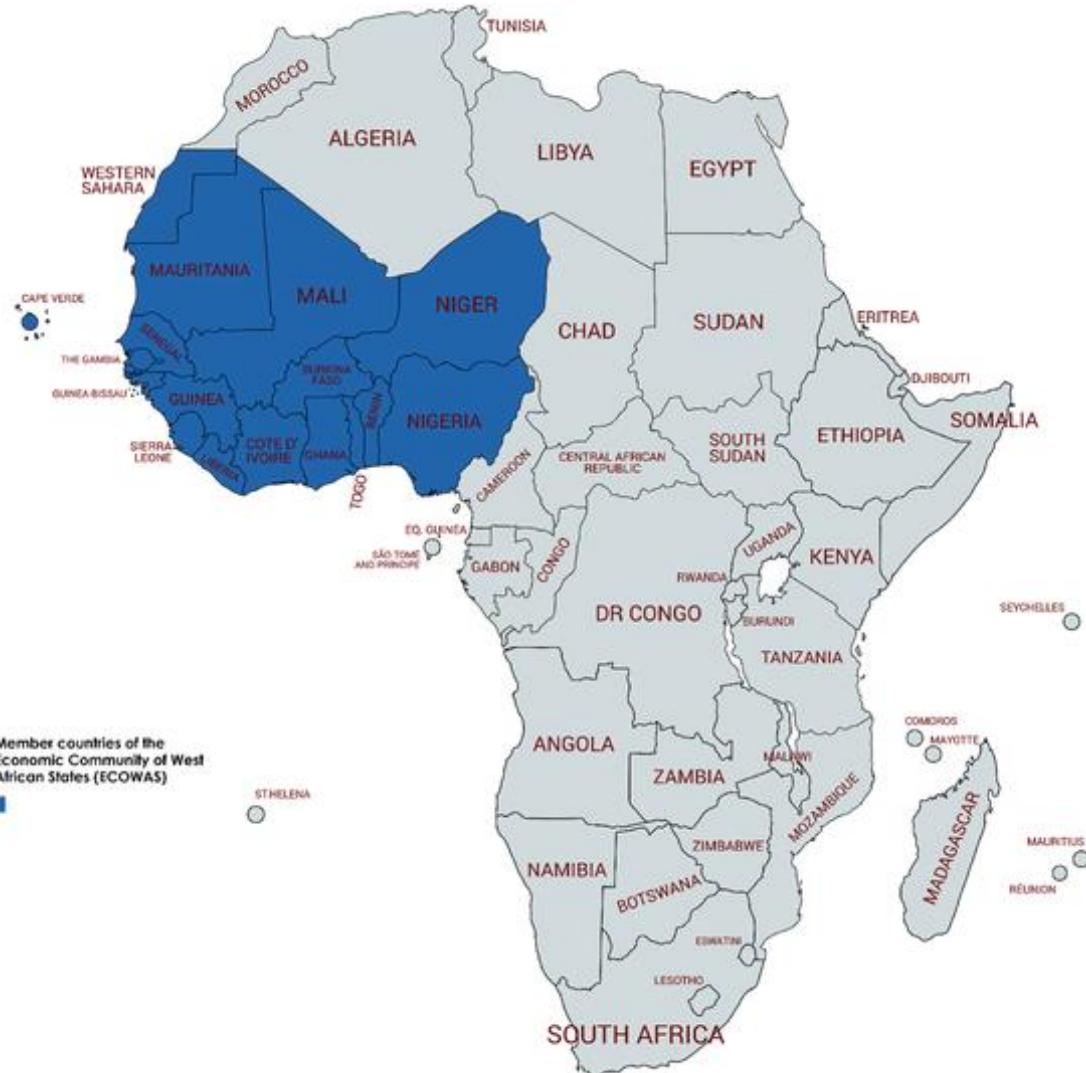

The ethnomycological knowledge of mushrooms, their historical uses as

- Food,
- Medicines,
- Source of income,
- sociological impacts

(Osarenkhoe et al., 2014)

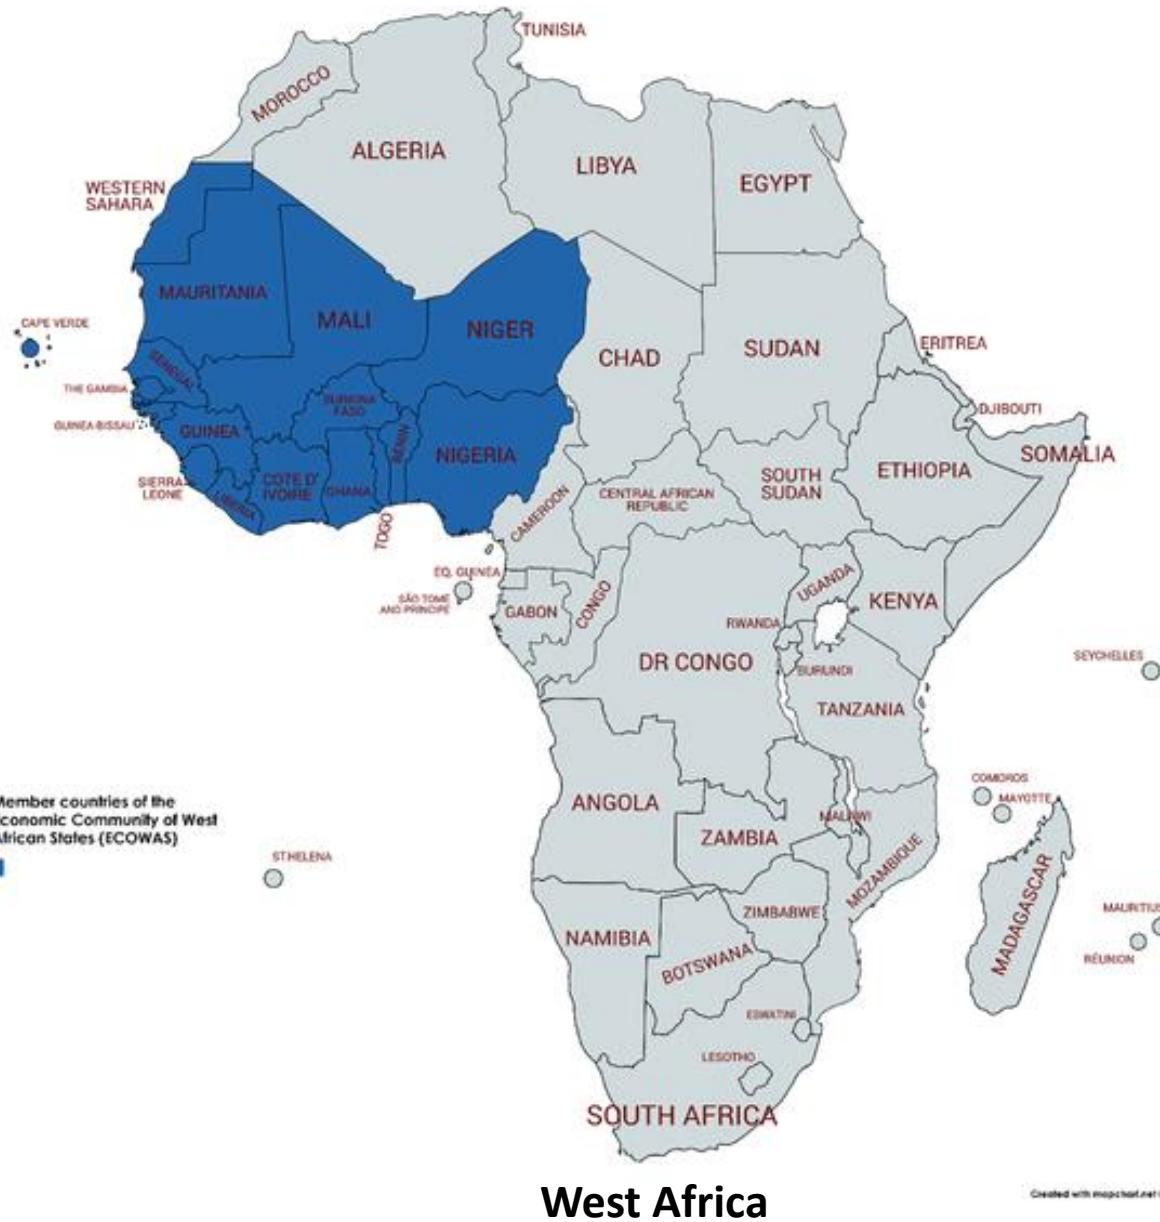

General info (2/3)

West Africa

- Underexploitation and underutilization
 - anthropogenic,
 - ethnographic,
 - environmental origin.

General info (3/3)

□ Ethnomycological data

- scarce,
- random,
- limited, and inconsistent from a taxonomic point of view.

Diversity of wild edible mushrooms in the African continent (1/4)

➤ Climatic conditions

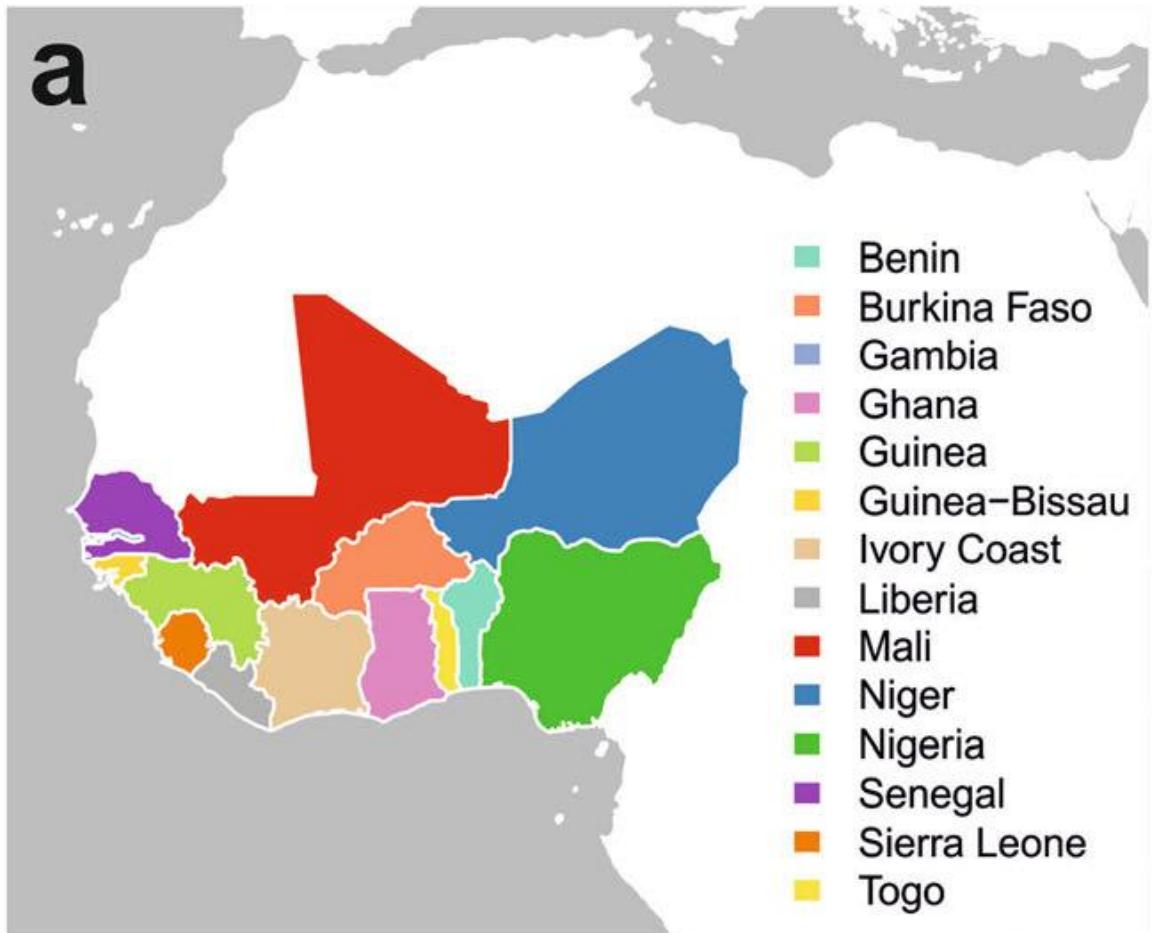

Diversity of wild edible mushrooms in the African continent (2/4)

□Globally

- estimated at around 1.5 million species (Hawksworth, 2001; O'Brien et al., 2005)
- although only about 7% of these are known (Hawksworth, 2002).
- This percentage decreases even further in West Africa, where only about 3% of all fungi species are known (Yorou, 2010).

Diversity of wild edible mushrooms in the African continent (4/4)

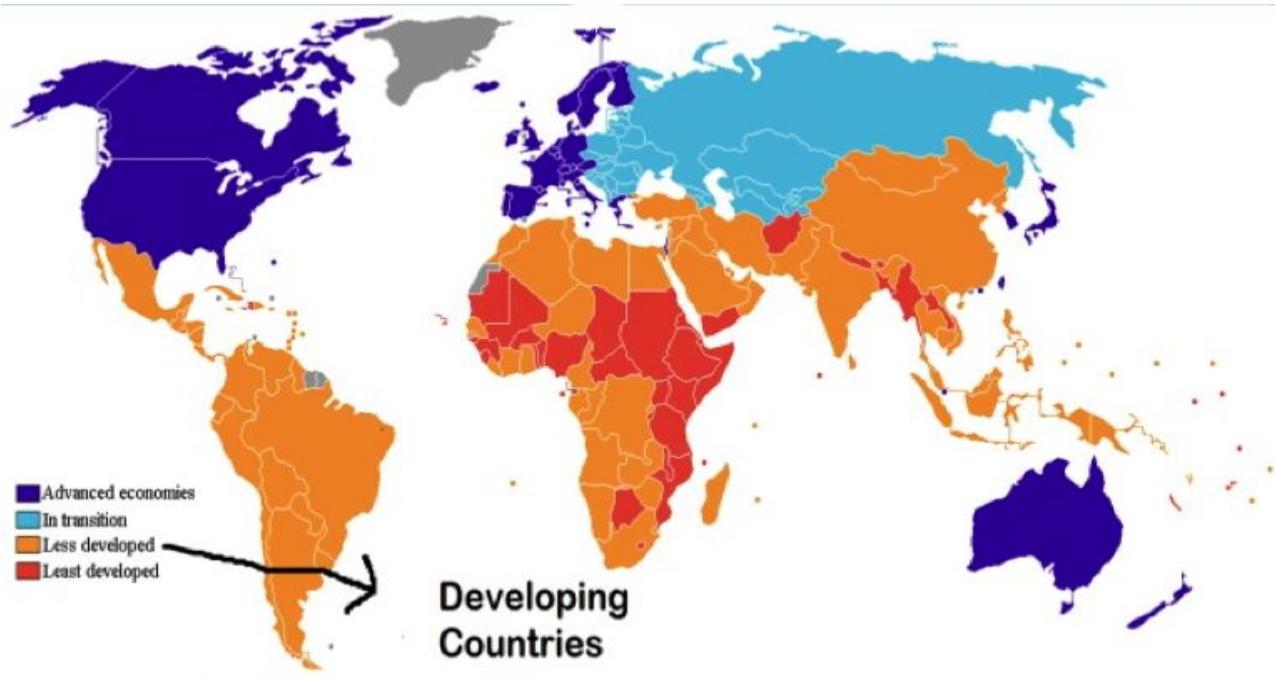

- More than 16,000 records of fungi representing 4843 species infraspecific taxa
- 860 publications 'West Africa'
(Piepenbring et al., 2020)

Fig. Numbers of fungal species and estimations for fungal species richness in West Africa and West African countries

Traditional and medicinal uses of mushrooms in Western Africa edible mushrooms (1/9)

□ Traditional knowledge of mushrooms

Relationships

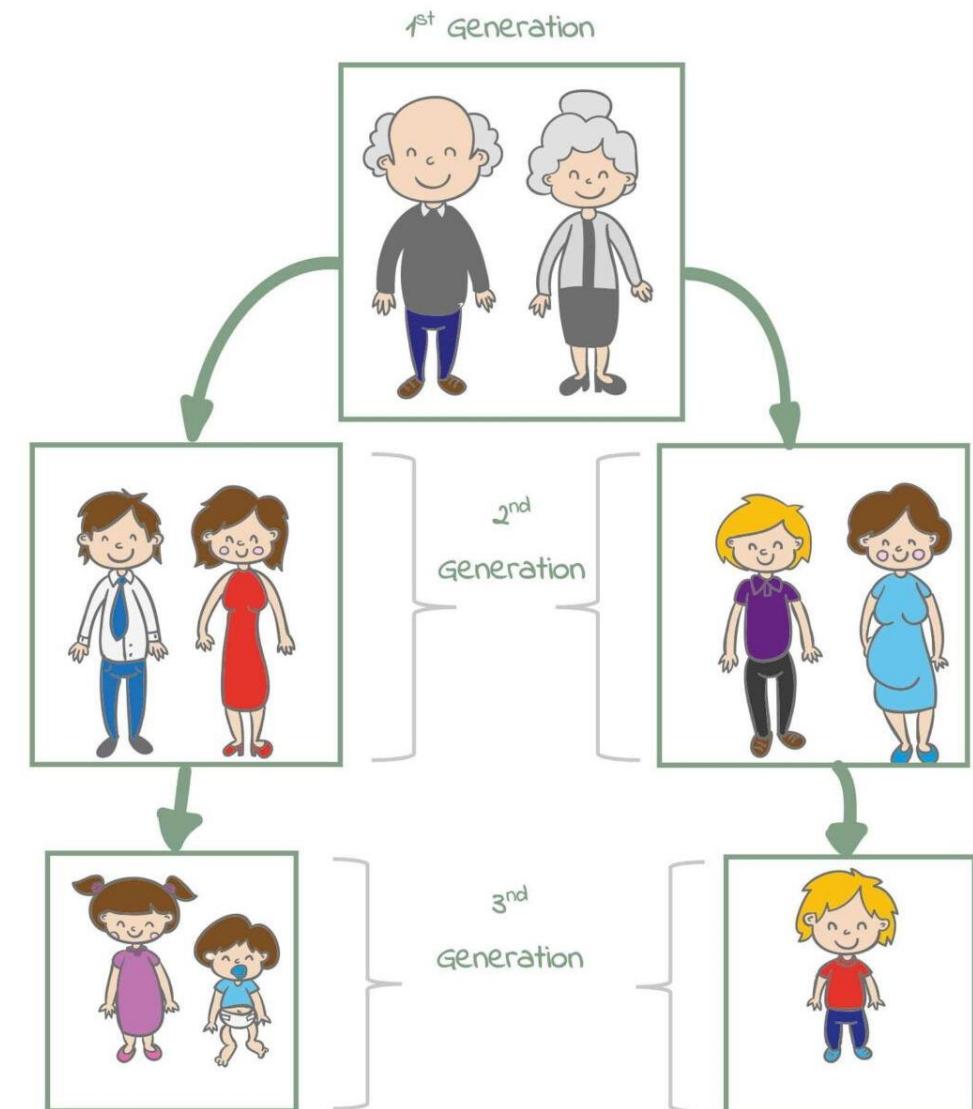

- Humans and fungi in a given environment,
- The past and in the present civilizations

(Molares et al., 2020; Sitotaw et al., 2020)

The Transmission of Knowledge

3 Generation Family tree For Kids

One generation to another

(Molares et al., 2020)¹⁰

Traditional and medicinal uses of mushrooms in Western Africa edible mushrooms (3/9)

□Nutritionnal importance

- Low-energy levels and high amounts of minerals,
- Essential amino acids,
- Vitamins, and fibers

(Leal et al., 2013)

Good source of proteins

Volvariella volvacea

- 40 g/100 g od fresh matter (Adejumo et al., 2015).

Traditional and medicinal uses of mushrooms in Western Africa edible mushrooms (4/9)

□ Nutritionnal importance

- Carbohydrates such as glucose,
- Chitin,
- Glycogen,
- Glucan,
- Low-fat profile.

(Rahi & Malik, 2016)

Traditional and medicinal uses of mushrooms in Western Africa edible mushrooms (5/9)

- Makes these suitable food and low cost nutrition(Barros et al., 2013)

Traditional and medicinal uses of mushrooms in Western Africa edible mushrooms (6/9)

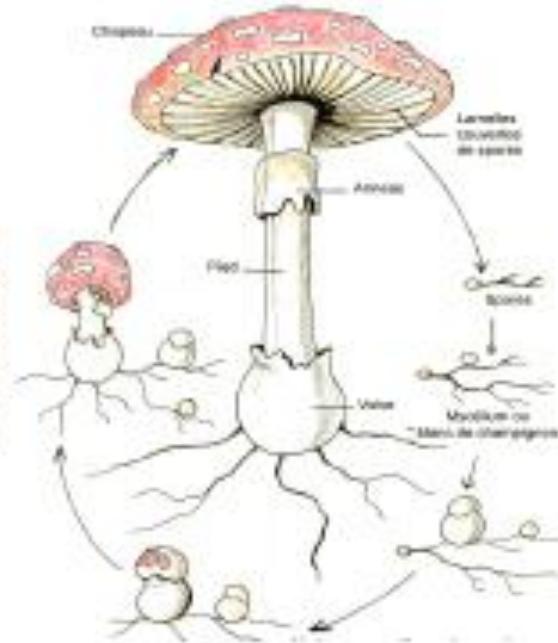

□ Use in medicine

➤ Two (02) categories of metabolites

Primary metabolites e.g,

Sugars, amino acids,

vitamins

Growth and development

*Secondary metabolites e.g,
sapogenin, alkaloids*

Responsible for the colour : Colors, tastes, odors, applications 'pharmaceutical industry'

Traditional and medicinal uses of mushrooms in Western Africa edible mushrooms (7/9)

□ Use in medicine

Polysaccharides, bioactive compounds present in medicinal mushrooms, exhibiting different spectrum of bioactivities

- antitumor,
- anti-proliferative,
- antidiabetic,
- anti-inflammatory,
- antimicrobial assets.

Traditional and medicinal uses of mushrooms in Western Africa edible mushrooms (8/9)

□ Use in medicine

Its antimicrobial assets

- *Scherichia coli*,
- *Staphylococcus aureus*,
- *Bacillus subtilis*,
- *Candida albicans* (Wisbeck et al., 2002)

Asia, Europe, South America

Traditional and medicinal uses of mushrooms in Western Africa edible mushrooms (9/9)

□ Use in medicine

- Stomachache,
- Hemorrhoids,
- Rheumatism,
- Arthritis,
- Neoplasia,
- Insecticide and antibiotic.

(Oyetayo, 2011; Soro et al., 2019;
Yongabi et al., 2004)

Identification of edible and inedible wild mushrooms and toxicology problems (1/2)

Benefits that come from the regular consumption of mushrooms :

- harvesting of wild mushrooms for own consumption is a risky activity
- since the correct identification of species is essential for its conscious and safe consumption (Machado-Goncalves et al., 2018).

Identification of edible and inedible wild mushrooms and toxicology problems (2/2)

The correct taxonomic identification of mushrooms is challenging

- No single tool can allow unambiguous species identification in most cases.
- An integrative taxonomical approach seems to be the best practice, aiming at evaluating diagnostic characters, either phenotypic, molecular, or both, also combining genealogy (phylogeny), phenotype (including autecology), and reproductive biology data

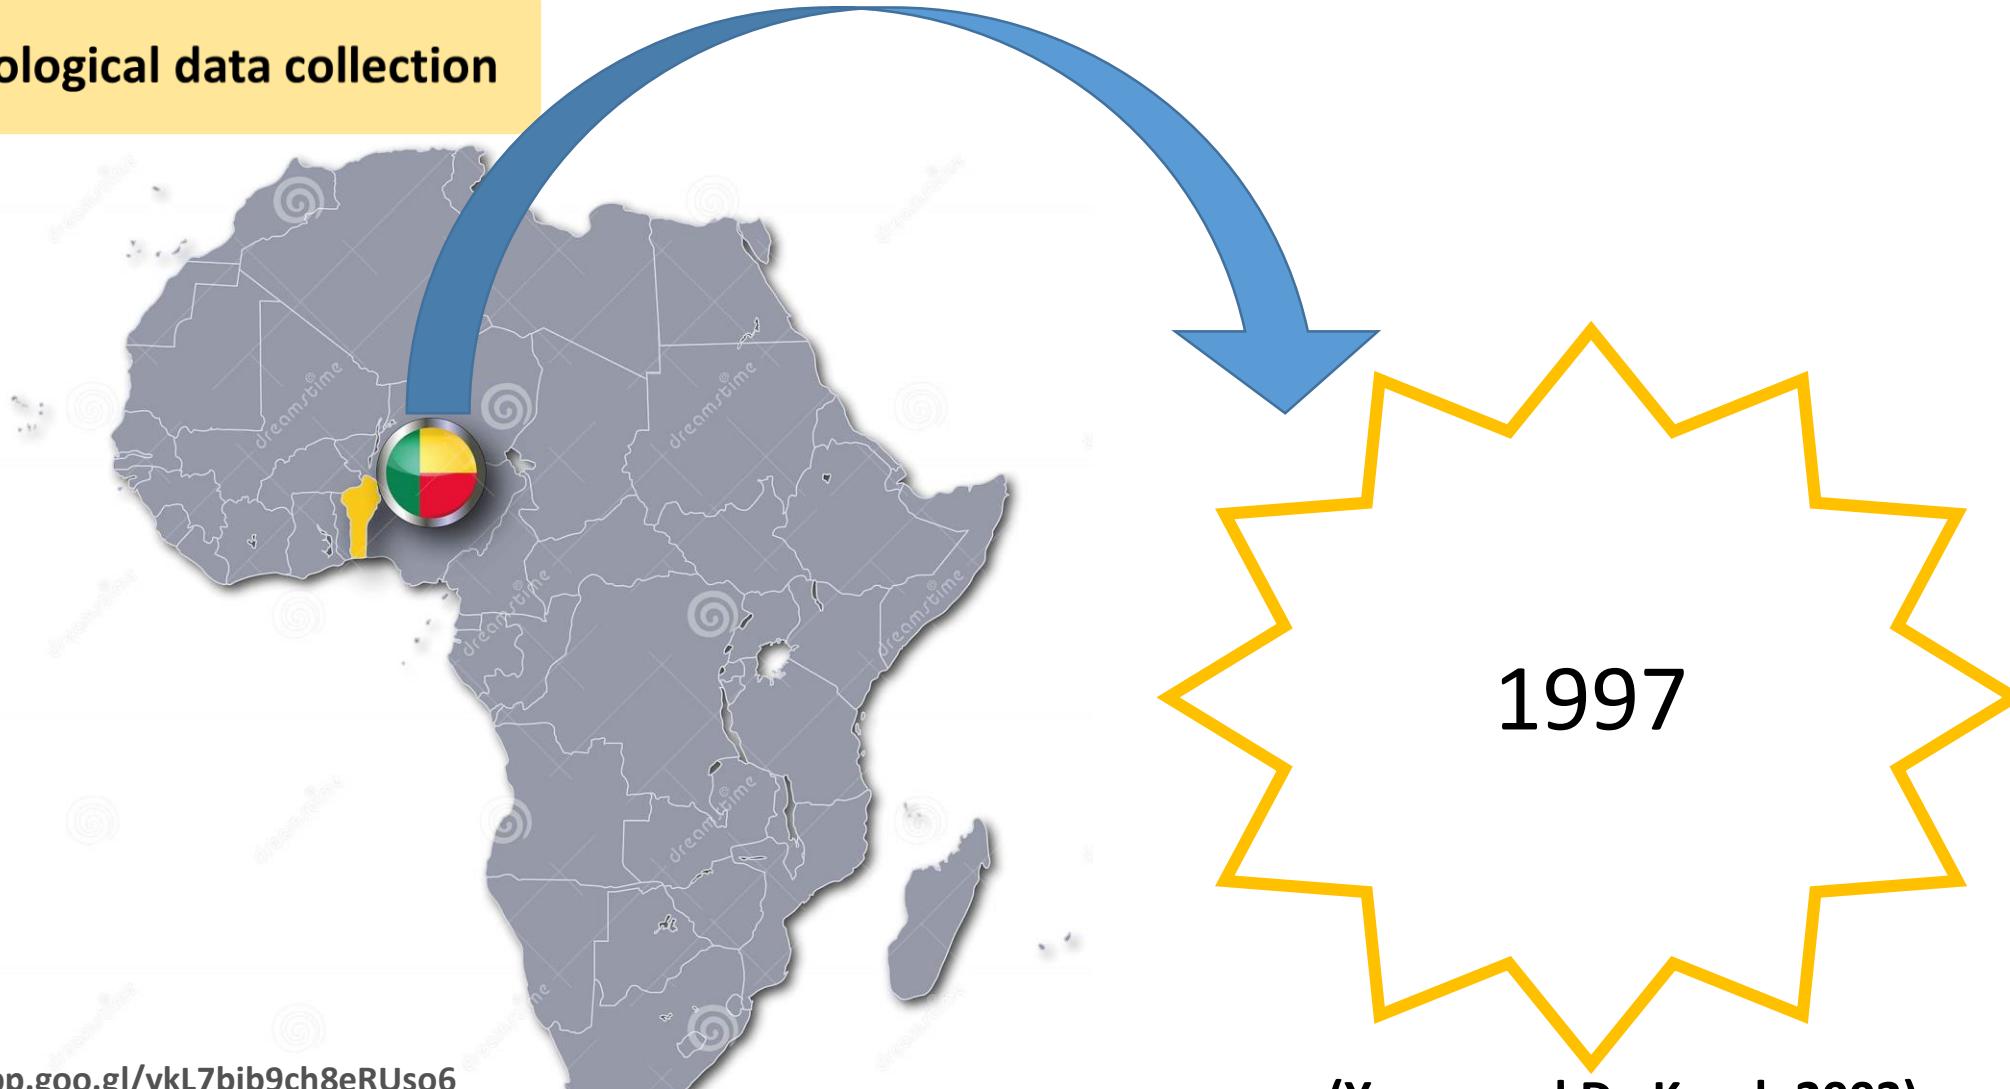

(Kissanga et al., 2022).

Specific case from Benin (1/32)

Specific case from Benin (2/32)

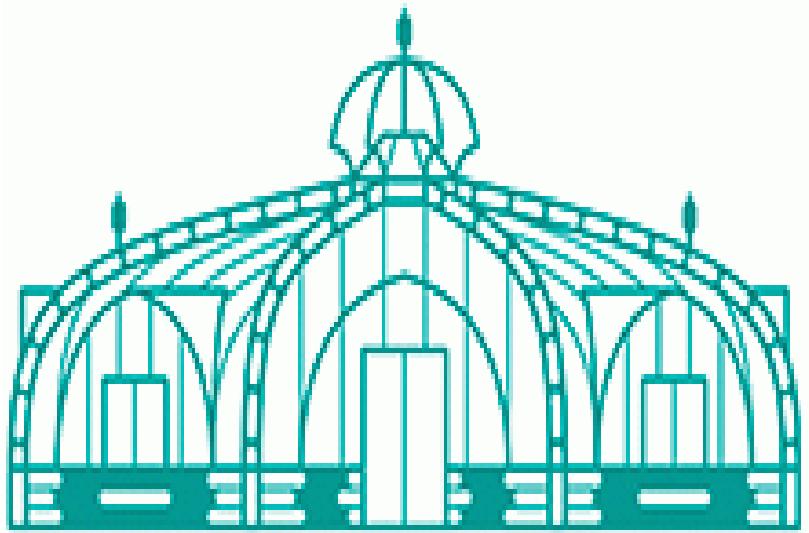

❖ Start of ethnomycological data collection

Specific case from Benin (8/32)

❖ Food

Specific case from Benin (9/32)

❖ Source of income (Benbèrkè in the North)

Lactifluus gymnocarpoïdes

(Akounnou et al., 2020)

Pile of mushrooms (0,038 Euro)

Specific case from Benin (11/32)

❖ Source of income (Benbèrkè in the North)

1

(Akounou et al., 2020)

2

Bowl (3,05 to 4,58 Euro)

Specific case from Benin (12/32)

❖ Source of income (Benbèrkè in the North)

- To feed the household,

- To buy chemical products for field work.

Specific case from Benin (13/32)

❖ The most abundant species (Amanita, Lactarius and Russula)

Amanita masasiensis

Lactifluus gymnocarpoïdes

Russula congoana

❖ The most appreciated species

Termitomyces schimpri

Termitomyces letestui

(Codjia and Yorou, 2014)

<https://images.app.goo.gl/WQTez8DKrh6fxdxB7>

Candidoleomyces tuberculatus

Volvariella volvacea

Collybia sp.

(Codjia and Yorou, 2014)

Specific case from Benin (14/32)

- ❖ According to the sociolinguistic groups the most appreciated species have tastes similar to

Meat

https://images.app.goo.gl/EjnmScHmh_tpgorJj9

Fish

<https://images.app.goo.gl/W5adnJgbUi3jRmnE6>

(Yorou and De Kesel., 2002)

Poultry

<https://images.app.goo.gl/4WTcuxKTkvbM27wa8>

Specific case from Benin (15/32)

- ❖ Small species are used as spices in sauces

Candolleomyces tuberculatus

Spices

<https://images.app.goo.gl/63i1ptvZwRi3EeBo8>

(Yorou and De Kesel., 2002)

Specific case from Benin (16/32)

❖ Cooking method: less demanding and non-toxic species

Termitomyces letestui

- Cleanly wash with water

- Put in sauces

(Fadeyi et al., 2017)

Specific case from Benin (17/32)

- ❖ Slightly bitter species are pre-cooked with potash and ash

Lactifluus gymnocarpoïdes

(Yorou and De Kesel., 2002; De Kesel et al., 2002; Boni and Yorou, 2015;
Fadeyi et al., 2017)

Potash

Ash

<https://images.app.goo.gl/nTkQJPFqy3GZebe1>

Specific case from Benin (18/32)

❖ Cooking method: Amanita species with salt or potash

Amanita subviscosa

Amanita congolensis

1

2

➤ Crust on the fruits
bodies surface

<https://images.app.goo.gl/cVm8C6JcIRDxBBM7>

(Boni and Yorou, 2015; Fadeyi et al., 2017; Fadeyi et al., 2019)

1

2

Salt

Potash

Specific case from Benin (19/32)

❖ Cooking method: Amanita species

Amanita crassiconus

- **Washed and boiled in water**

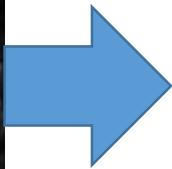

- **Sun drying (1 week) before use**

(Boni and Yorou, 2015)

Specific case from Benin (20/32)

❖ Cooking method: Hard

- **Washed and boiled in hot water (1 hour)**

(Fadeyi et al., 2017)

Lentinus squarrosulus

Specific case from Benin (21/32)

- ❖ Treat several diseases

(Fadeyi et al., 2017)

Amanita masasiensis (Yom)

- Stomach ulcer

Specific case from Benin (22/32)

Table 2: Edible species per Linguistic groups and biological groups

N'Dali Région – (North of Benin) (Boni and Yorou., 2015)

Ancestral knowledge which are transmitted from generation to generation

Specific case from Benin (24/32)

- ❖ High mycophagy (Nagot Sociolinguistic group)

<https://images.app.goo.gl/nDP1wmUE87e3JABA8>

<https://images.app.goo.gl/LhxnBd3PnC1UTn9aA>

Nagot from Nigeria (Yorou and De Kesel, 2002; De Kesel et al., 2002)

Specific case from Benin (25/32)

❖ High mycophagy (Nagot Sociolinguistic group)

About fifty macromycete species are consumed by Nagot people of central Benin

- *Amanita*
- *Auricularia*
- *Boletus*
- *Cantharellus*
- *Chlorophyllum*
- *Gymnopus*
- *Hebeloma*
- *Lactarius*
- *Lentinus*
- *Candolleomyces*
- *Russula*
- *Volvariella*
- *Termitomyces*

<i>Termitomyces clypeatus</i> Heim	ADK1947, ADG114	soisoï soisoï = après, à fructification tardive
	ADK2193	itikpajè itik = pied, ajè = oiseau
<i>Termitomyces fuliginosus</i> Heim	ADK2237, Y82	osusu akété akété = termite
<i>Termitomyces letestui</i> (Pat.) Heim	ADK2053	okoadja queue (= oko) du chien (= adja)
<i>Termitomyces medius</i> Heim & Grassé	ADK2136	loo loo = vaste, poussant sur de grandes étendues
	ADK2807	osusu fée
<i>Termitomyces microcarpus</i> (Berk. & Broome) Heim	ADK2278	wiliwili wili = beaucoup
<i>Termitomyces schimperi</i> (Pat.) Heim	Y118	inku aginaku inku = genou (l'os), aginaku = éléphant
<i>Termitomyces striatus</i> (Beeli) Heim s.l.	ADK2830	osusu émé émé (emi) = Vitellaria paradoxa (karité)
<i>Volvariella earlei</i> (Murr.) Shaffer	ADK1948, ADK3102, Y100	gnomé, guémô gnomé = billon, dans les champs à billons
	ADK2352	osusu gêmô/kpaké kpaké = manioc, dans les champs de manioc
<i>Volvariella volvacea</i> (Bull. ex Fr.) Singer	ADK2687	osusu féré ?

(Yorou and De Kesel, 2002)

Specific case from Benin (26/32)

❖ Collection of mushrooms is only a secondary activity

corresponds with the period of preparation of the crop fields.

<https://images.app.goo.gl/xH4Bcj5ka9EemZJr7>

Zea mays

<https://images.app.goo.gl/YJwLYm2WNRNPKF2T8>

Oryza sativa

(Yorou and De Kesel., 2002)

<https://images.app.goo.gl/RwAFguCtzkoFWbZPA>

Dioscorea alata

Specific case from Benin (27/32)

Collecting firewood

<https://images.app.goo.gl/iDc3eqoPUhmL1BdTA>

<https://images.app.goo.gl/tDCkrT7b9E3TBqS8A>

(Yorou and De Kesel, 2002; De Kesel et al., 2002; Codjia and Yorou, 2014 ; Boni and Yorou, 2015; Fadeyi et al., 2017; Fadeyi et al., 2019).

Specific case from Benin (28/32)

❖ Men
(hunters)

<https://images.app.goo.gl/5NdUPyhNqmCvDCq28>

Rich knowledge in folk medicine

(Yorou and De Kesel, 2002; De Kesel et al., 2002;
Codjia and Yorou, 2014 ; Boni and Yorou, 2015;
Fadeyi et al., 2017; Fadeyi et al., 2019)⁴⁶

Specific case from Benin (29/32)

- ❖ Most wild edible mushrooms are ectomycorrhizal fungi

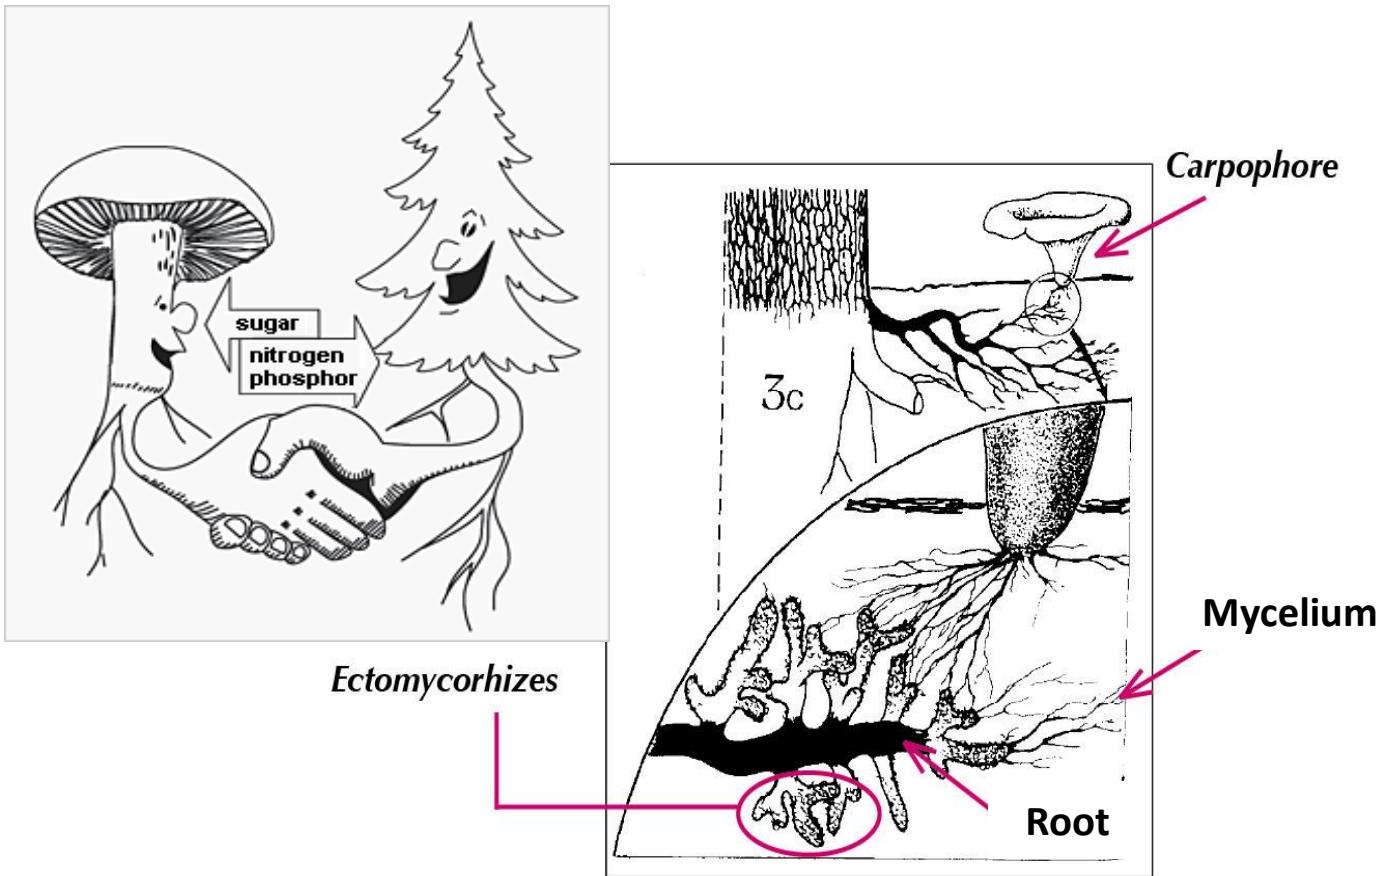

Fig. Ectomycorrhizal symbiosis

<https://images.app.goo.gl/7Nf2s8wogyxzfYAos8>

Specific case from Benin (30/32)

❖ Ectomycorrhizal families

Caesalpiniaceae

Phyllantaceae

Caesalpiniaceae

(De Kesel et al., 2002 ; Yorou et al., 2002 a,b, c)

Specific case from Benin (31/32)

❖ Ectomycorrhizal families

(De Kesel et al., 2002 ; Yorou et al., 2002 a,b, c)

Dipterocarpaceae (*Monotes kerstingii* Gilg).

<https://images.app.goo.gl/oWThgM5pY3QxKtXTA>

Specific case from Benin (31/32)

❖ Several identification criteria of edible and non edibles mushrooms

“All the ethnic groups are found around of two major senses: the taste and the visual (Heim, 1977)”

- Odour

- Taste

- Colour

- Proximity to trees whose fruits are edible

- Form

(Yorou and De Kesel, 2002; De Kesel et al., 2002; Codjia and Yorou, 2014 ; Boni and Yorou, 2015; Fadeyi et al., 2017; Fadeyi et al., 2019).

Specific case from Benin (32/32)

❖ Traditional nomenclature

Lactarius saponaceus : Nagot "osusu wawo" which mainly grows under the tree *Uapaca togoensis* (Euphorbiaceae). (Boni et Yorou, 2014)

Uapaca togoensis (Euphorbiaceae)

<https://images.app.goo.gl/1YUCXwQevp9yq7RG9>

Ploceus cucullatus

<https://images.app.goo.gl/5QZuCDmbQjcJkZKfA>

CONCLUSION (1/2)

- The local populations have very rich and diverse knowledge on the uses of mushrooms
- We know a lot about the influence of ethny, age, sexe on ethnomycological knowldeg.
- What remains to document is among other how demographic/migratory traits affect present ethnomycological knowledge of the ethnic groups.

CONCLUSION (2/2)

Questions to reply

- Does the origin of the respondent (or his ethnic group) affect his present ethnomycological knowledge?
- Is there a link between level of knowledge and period of installment?
- Question to reply to: Is there a link between knowledge depreciation with generations?
- Question: Does linguistically close ethnic group hold similar approach to naming taxa?

- Fungal Diversity of tropical Africa: Edible mushrooms of Benin - FunTrAf; Federal Ministry of Education and Research (BMBF, Germany)
- African-German Network of Excellence in Science (AGNES-PAWS MOBILITY GRANT)
- Korea Forest Service in South Korea
